Interview Preparation

Entry-level software and IT interview checklist

CampusConnect • Student Learning Resource

Before the interview

- Read the job description and identify key skills.
- Review your CV and be ready to explain every project and technology listed.
- Prepare a short introduction with your background, skills, and one project.

Explain projects

- Describe the problem, the technologies used, your contribution, and the result.
- Explain one challenge, how you investigated it, and what you learned.
- Be honest about what is complete and what you would improve.

Technical topics

- JavaScript: functions, arrays, objects, promises, async/await.
- React: props, state, components, effects, conditional rendering.
- Next.js: App Router, Server and Client Components, routing, data fetching.
- Git: status, add, commit, branch, pull, push; web basics: HTTP, APIs, HTML, CSS.

Behavioral questions

- Tell me about yourself.
- Describe a problem you solved while building a project.
- What do you do when you do not know an answer?
- How do you prioritize tasks with a deadline?

Answer structure and questions

- Use Situation, Task, Action, Result to organize examples.
- Ask what success looks like in the first months, which technologies the team uses, and how code reviews work.

Final checklist

- Test your connection if online, arrive early, keep your CV and project links ready, and ask for clarification when needed.
